Functional principle

The measuring principle of inductive encoders is based on oscillation circuit coupling between the positioning element and the sensor, whereby an output signal is provided proportional to the angle of the positioning element. Turck refers to semi-multiturn because the multiturn process data is calculated internally from the number of single-turn zero passes. Because the sensor does not detect any revolutions when not supplied with power, the plausibility of the multiturn process data is indicated by a diagnostic bit. The rugged sensors are maintenance- and wear-free thanks to the contactless operating principle. They convince through their excellent repeatability, resolution and linearity within a broad temperature range. The innovative technology ensures high immunity to electromagnetic DC and AC fields.

Default: 0°

Extensive range of mounting accessories for easy adaptation to many different shaft diameters. Based on the functional principle of RLC coupling, the encoder is immune to magnetized metal splinters and other interferences.

The adjacent figure shows the two separate units, sensor and positioning element.

Mounting option A:

First, interconnect positioning element and rotatable shaft with the bracket. Then place the encoder above the rotating part in such a way that you get a tight and protected unit.

Mounting option B:

Push the encoder on the back site of the shaft and fasten it to the machine. Then clamp the positioning element to the shaft with the bracket.

Mounting option C:

If the positioning element is screwed on a rotating machine part and not to a shaft, you must first put on the dummy plug RA8-QR24. Then tie up the bracket. Screw on the encoder via the three bores.

When mounting, ensure that the positioning element is correctly aligned towards the sensor's active face. For correct fitting see arrow on the edge of the positioning element. (Arrow must point in direction of sensor)

Due to the separate installation of positioning element and sensor no electrical currents or harmful mechanical forces are transmitted via the shaft to the sensor. The encoder also offers a high degree of protection for life and stays permanently sealed.

The accessories enclosed in the delivery help to mount encoder and positioning element at an optimal distance from each other. LEDs indicate the switching status. Optionally, you can use the shield plates which are included in the accessories to increase the allowed distance between positioning element and sensor.

Status display via LED

green

Sensor is supplied correctly, asynchronous mode

green flashing

Sensor is supplied properly, synchronous mode

green fast flashing:

Sensor is supplied properly but is not receiving CLK pulses from the SSI master

yellow

Positioning element is in the measuring range, signal low (e.g. distance too large), see status bit 23

yellow flashing

Positioning element is outside the coverage, see status bit 24

off

Positioning element is in the measuring range

Multiturn error

red:

Position was changed during power drop, see status bit 22

Parameters	Easy-Teach Input	LED Display	Description
Zero point	Bridge Pin 1 (GND) and Pin 8 for 2 s	Status LED flashes, after 2 s steady	Encoder position set to zero. The Multiturn flag and the red LED are reset
Switching between sync/async mode	Bridge Pin 2 (U _B) and Pin 8 for 2 s	Status LED flashes, after 2 s steady Power LED steady green: async mode, Power LED flashes green: sync mode	The encoder is by default set to asynchronous mode. The encoder switches between async/ sync mode by means of a teach pulse
Effective mode	Bridge Pin 2 (U _B) and Pin 8 for 10 s	After 10 s status LED flashes for 2 s	Effective direction of encoder CW (factory setting) Multiturn values are reset
	Bridge Pin 1 (GND) and Pin 8 for 10 s	After 10 s status LED flashes for 2 s	Effective direction of encoder CCW Multiturn values are reset
Multiturn error- flag	Bridge Pin 1 (GND) and Pin 8 for 15 s	After 15 s power and status LED alterante	Multiturn Error and multiturn counters are reset
Switching between single/multiturn mode	Bridge Pin 2 (U _B) and Pin 8 for 20 s	After 20 s the red LED flashes	Validity depends on revision status
Easy-Teach reset	Bridge Pin 2 (U _B) and Pin 8 for 15 s	After 15 seconds, power and status LED flash alternately; In case the red LED lights up, the Easy-Teach reset must be triggered again	The following factory defaults are restored: Effective direction (CW), zero point, multiturn error (delete), multiturn counter (zero)

To avoid unintended teaching, keep pin 8 potential-free.
