Wiring diagram

Functional principle

The Q4XTBCOD300-Q8 is a laser sensor specially designed to detect transparent objects, with 300 mm range and bipolar laser class 1 switching outputs (1 PNP and 1 NPN). In this sensor, clear object detection (COD) is preconfigured to allow transparent objects to be detected using a simple device configuration. With the dual mode functionality, the Q4X captures not only distances but also the light intensity that is reflected by an object. This unique feature allows lasers to be used for applications that would have been inconceivable before this.
