Functional principle

The Q4X is a class 1 laser-distance sensor working on the principle of triangulation. It has a range of up to 600 mm, depending on the model, and bipolar switching outputs or analog output.

With the dual mode functionality, the Q4X captures not only distances but also the light intensity that is reflected by an object. This unique feature allows laser sensors to be used for applications that would have been

inconceivable before this. This means that even clear objects can be reliably detected. Dual mode is only available for devices with a switching output.

In RUN mode, you can change the value of the output as well as the switching function, and perform the selected teach mode. Another sensor status is setup mode. In setup mode, you can select teach mode, all standard operating parameters or a factory reset.
