Wiring diagram

Functional principle

Ultrasonic sensors capture a multitude of objects contactlessly and wear-free with ultrasonic waves. It does not matter whether the object is transparent or opaque, metallic or non-metallic, firm, liquid or powdery. Even environmental conditions such as spray, dust or rain hardly affect their function.

The sonic cone diagram indicates the detection range of the sensor. In accordance with standard EN 60947-5-2, quadratic targets in a range of sizes (20 × 20 mm, 100 × 100 mm) and a round rod with a diameter of 27 mm are used.
Important: The detection ranges for other targets may differ from those for standard targets due to the different reflection properties and geometries.

Mounting instructions

Mounting instructions/Description	
	Setting the reflector position The ultrasonic sensor features a switching output with a teachable switching range. The green and yellow LEDs indicate whether the sensor has detected the object. A switching range is taught in. This must be within the detection range. In this operating mode, the taught reflector is detected permanently without an object. Easy-Teach Connect teach adapter TX1-Q20L60 between the sensor and the connection cable

Position the stationary reflector within the detection range
Press and hold button against Gnd for at least 2 s
• Return to normal operating mode after 17 s or more.

After a successful teach-in, the green LED flashes at 3 Hz and the sensor operates automatically in normal mode.

#LED response
In normal operating mode, the two LEDs indicate the switching state of the sensor.

- Green: Reflector within the detection range
- Yellow: Object between the sensor and the reflector
